The Key Citations series was developed to provide a starting point for persons new to the various fields of impact assessment. The references provided are an indicative overview of the field and establish what might be regarded as the core literature. They include a selection of currently available textbooks published by commercial publishers, a selection of journal articles from the last 10 or so years, and key official documents. Some historically significant articles are also included. The means of determining key citations generally include consulting Scopus and Google Scholar and expert practitioners in the field. IAIA members contributing to this series acknowledge possible personal and regional bias and much difficulty in selecting only a few from among many excellent references in their fields.

INTRODUCTORY COMMENT

Gender as a concept describes the power relations and different social realities mostly for women and men and occasionally also for transgender and intersex people. The United Nations Entity for Gender Equality and the Empowerment of Women’s Beijing Platform for Action states that women should enjoy “a full and equal share in economic, social, cultural and political decision-making.” While it is well known in impact assessment circles that there are gender-based impacts of all activities, too often not enough consideration is given to gender issues. In these key citations for Gender and Gender Impact Assessment, the key literature is presented. Collectively they reveal how gender equality is a matter of human rights, a condition for social justice and a fundamental prerequisite for sustainable development, health and peace. They also demonstrate how to incorporate gender issues into impact assessment.
