SD in the business culture of Shell

- Integrating economic, environmental and social considerations in the decision-making process across all our business activities
- Addressing both short-term and long-term needs
- Meeting our SD commitments and working with stakeholders

 Providing products and services in a profitable and environmentally and socially responsible manner

Defining the business case for SD

- Improving eco-efficiency
- Reducing risk
- Influencing product and service innovation
- Attracting people and customers
- Enhancing reputation

Leadership in profitability and profitable growth with an overarching commitment to SD

Progress toward SD

- **1990** First SD Policy adopted
- **1991** First SD Report published
- **1997** Commitment to dialogue, decide and deliver embedded into Oil Sands Project planning
- 2000 Shell Canada Climate Change Advisory Panel established
- **2001** ISO 14001 registration achieved
- 2003 Revised Commitment to SD

SD integration

Sustainability assessment

 An analysis of a project plan/other business proposal to determine how sustainable are its objectives, outcomes and overall goal

 Sustainability may be gauged by the project/proposal's capacity for delivering economic, environmental and social benefits while controlling or minimizing any negative impacts associated with its development, implementation and, ultimately its termination

Scope

 The sustainability assessment tool is designed for use during the initial planning phase of a project/proposal

LI BONS

Method

Sustainability is measured against seven SD principles

 For each principle, a guide is given on what would be considered sustainable

 Each component is evaluated against this guide and performance measures/indicators and recorded as a risk benefit assessment

 Decisions are reached (ideally) following group discussion

Shell Canada is of economic, and activities. It mean

Commitm

Our sectivities are guided by the following princip

Constate robust profitability

Commitment to Su

Successful founded performance is essential to our austrimities future and centrifuctes in the prosperity of anciety.

and Environment Policy

- use material and energy-efficiently to previde our products and services.
- develop energy resources, products and services consistent with these stres.
- publicly report on our performance and engage is stated other executivities.
- · pity a heading role in proceeding best procedure is not industry.
- memory leads, solvey and environment to any other critical local-ass activity.
- promote a culture in which all their employees above this commitment.

Shell Canada Limited

Generate robust

profitability

- Issue applematic segments to leads, as key and eminemental management designed to ensure compliance with the less and to achieve conditioned parternance improvement;
- satisticity and improvement and measures, approximation imports performance.
- mealme controctors to manage in accordance with this policy.
- topping juict vestores order its speechest sector to apply this policy and uses its informer to prevate this policy is its other vestores.
- Includes health, soliely and environmental performance is the apprinterial of all staff and rewards accordingly.

We trive to indices a leafity strikey and eminemental performance fractions are proof of to even the confidence of cathorese, stranslutions and sectory of large, to be a good seligibleur and to contribute as suspitable development.

Work with stakeholders

Deliver value to customers

Respect and safeguard people

Benefit communities

Sustainability analysis

Shell SD Principle	Description	RBA *
ECONOMIC ASPECTS		
1. Generate robust profitability	Successful financial performance is essential to our sustainable future and contributes to the prosperity of society	
2. Deliver value to customers	Customers are the lifeblood of our business. We seek constantly to strengthen existing customer relationships and develop new ones.	
ENVIRONMENTAL ASPECTS		
3. Protect the environment	The natural environment supports all human activity. We continually look for new ways to reduce the environmental impact of our operations, products and services throughout their life.	
4. Manage resources	Efficient use of natural resources, for example, energy, land and water, reduces our costs and respects the needs of future generations. We constantly look for ways to minimize their use.	
SOCIAL ASPECTS		
5. Respect and safeguard people	We aim to treat everyone with respect. We strive to protect people from harm from our products and operations	
6. Benefit communities	Wherever we work we are part of a local community. We will constantly look for appropriate ways to contribute to the general well being of the community and the broader societies who grant our license to operate.	
7. Work with stakeholders	We affect, and are affected by, many different groups of people, our stakeholders. We aim to recognize their interest in our business and to listen and respond to them.	
Overall SD Evaluation		

ALARP

• A process to reduce a risk to a level, which is "as low as reasonably practicable"

 ALARP involves balancing reduction in risk against the time, effort, difficulty and cost of achieving it

 This level presents the point, objectively assessed, at which time, effort, difficulty and cost of further reduction measures become unreasonably disproportionate to the additional risk/emission reduction achieved

ALARP concept

Sustainability analysis: scoring

Score	Significance
Very positive (++)	Acceptable, benefits clearly outweigh risks
Positive (+),	Acceptable, benefits outweigh risks
Neutral	Acceptable
Negative (-),	Requires further investigation and/or risk mitigation
Very Negative ()	Unacceptable unless adequate risk mitigation can be
	demonstrated
	E HANKER

Closing remarks

 External inputs (stakeholder engagement) should be accommodated in sustainability analysis where this does not compromise confidentiality

 ALARP provides a useful framework for risk analysis. A similar approach for "benefit analysis" is needed

 Sustainability is strongly coupled to the consequences of development. Sustainability analysis is also required post-planningthroughout the whole project cycle
