

## **EDITORIAL NOTE**

These case studies have been arranged and formatted to accord with the template produced for the 1994-96 International Study of the Effectiveness of Environmental Assessment. They have been edited to conform to standard English usage. For the sake of consistent presentation some rewriting and reformatting has been necessary. The editors accept total responsibility for these changes.

The quality of the graphics is in some cases poor, but they have been included as they give an indication of location even when the keys are not clearly decipherable. The terms 'Environmental Assessment' and 'Environmental Impact Assessment' are interchangeable, reflecting the local usage.

The author details at the end of each case study were those supplied at the initial presentation of the materials to IAIA and may not be current addresses.
